

SQL Data Analysis Report

Project 3 - DecodeLabs Internship | Batch 2026

Date: 2026-05-15

QUERY 1: Basic SELECT

Retrieved first 5 orders with OrderID, Product, Quantity and TotalPrice.

QUERY 2: WHERE Filter - Delivered Orders

Filtered only Delivered orders using WHERE OrderStatus = Delivered.

Insight: Only 231 out of 1200 orders were successfully delivered.

QUERY 3: ORDER BY - Top 5 Highest Orders

Sorted orders by TotalPrice DESC to find highest value orders.

Highest: ORD200789 - Tablet - Rs.3456.40

QUERY 4: GROUP BY + COUNT - Orders by Product

Printer: 181 orders (MOST POPULAR)

Phone: 156 orders (LEAST POPULAR)

QUERY 5: GROUP BY + SUM - Revenue by Product

Chair: Rs.195,620.11 (HIGHEST REVENUE) - Surprise winner!

Phone: Rs.151,722.39 (LOWEST REVENUE)

Insight: Most orders does not mean most revenue!

QUERY 6: AVG - Order Value by Payment Method

Credit Card: Rs.1127.55 avg (HIGHEST SPENDERS)

Debit Card: Rs.1001.56 avg (LOWEST SPENDERS)

QUERY 7: WHERE + GROUP BY - Cancelled Orders

Chair: 45 cancellations (MOST CANCELLED!)

Phone: 31 cancellations (LEAST CANCELLED)

Insight: Chair earns most BUT also gets cancelled most!

FINAL BUSINESS RECOMMENDATIONS

1. Investigate Chair cancellations - highest revenue at risk!
2. Promote Phone category - lowest orders and revenue!
3. Encourage Credit Card payments - highest avg order value!
4. Focus on delivery success rate - only 231/1200 delivered!
